

INSULATED POOL BLANKET SYSTEM

for Indoor and Outdoor Commercial Swimming Pools

Reduces Pool Operating Costs Dramatically

REDUCES POOL OPERATING COSTS DRAMATICALLY

The MacBall Heat Saver Thermal Pool Blanket and storage reel system offers the commercial swimming pool operator a practical, cost effective method to greatly reduce evaporation and heat loss. Heating, water replacement and maintenance costs are substantially reduced through effective insulation and evaporation control.

HOW YOUR POOL LOSES WATER AND HEAT

HEAT

Your pool loses heat via evaporation (60%), radiation and convection (30%) and losses to ground (10%). **90%** of these losses can be stopped with a MacBall Heat Saver Thermal Pool Blanket.

WATER

Each square metre of water surface can lose as much as **1000l of water p/a**. For a 25 x 20m pool this means a loss of 500,000l p/a to evaporation alone!

The proven MacBall Heat Saver system can reduce evaporation to near zero and because it insulates, it substantially reduces convection and radiation losses. Stopping evaporation cuts heat losses and saves on make up water requirements and costly chemicals.

The MacBall System provides for an excellent return on investment. Most systems pay for themselves within the first 18 months of use and continue to make financial savings with environmental benefits long after the initial investment is recouped.

Our pool blanket specialists can audit your pool to determine a tailored energy savings pay back and the reduction in water use specific to your pool.

The MacBall Heat Saver blanket is fabricated from a tough, tear resistant laminate that is non-toxic and chemically resistant. The unique construction with interlocking end and edge treatment, load distribution plates and double needle lock stitch fabrication far exceeds industry standards.

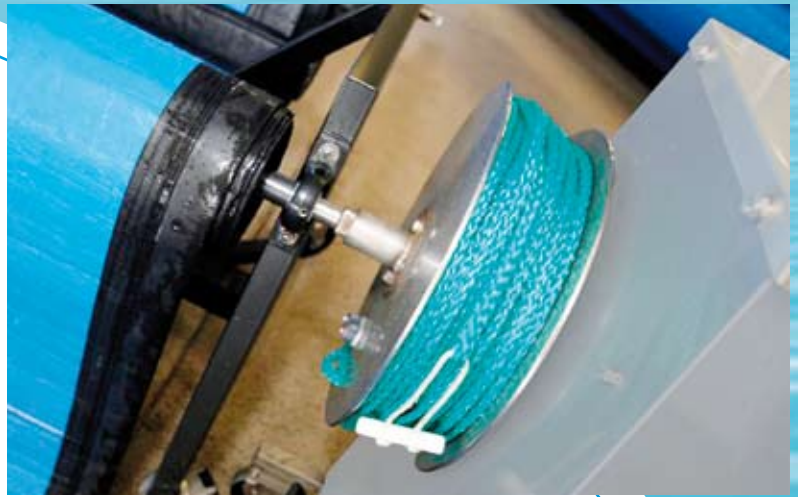

The MacBall Heat Saver blanket is fabricated in easy to manage panels. The blanket can be easily attached to a portable storage reel, which can be positioned on the deck or conveniently hidden from view within the deck or under a bench seat.

MacBall storage reels, which can be operated manually or automatically, are engineered for strength and durability and consist of powder coated stainless steel frames, non corrosive self aligning bearings and stainless steel heavy duty castors with 125mm easy run polyurethane wheels.

poolie's pal

AUTOMATED POOL BLANKET WINCH

The Poolie's Pal Automated Pool Blanket winch takes the hassle out of handling large pool blankets. It is a simple motorised winch that quickly and effectively pulls covers onto the pool and then drives the reels to pull them off the next morning. It is the most effective answer for handling large covers.

- Deploys and retrieves a 50m cover in less than 3 minutes and a 25m cover in less than 2 minutes
- 24V sealed batteries for a long life
- Built in battery charger
- Height adjustable drive to operate varying reel systems
- Integrated tip over cut out

Warranty

Each MacBall Heatsaver Thermal Blanket comes with an 8 year limited warranty*
Each MacBall Reel System comes with a 15 year warranty on Stainless Steel Components*
*Refer to manufacturer for detailed warranty

The Poolie's Pal is an effective way to address OHS concerns and make your pool blankets a trouble free task.
